November 16, 2023

### Vaccine Update:

We currently have a limited supply of the Beyfortus injection for RSV prevention in infants due to a national backorder. Learn more about [Beyfortus](#) here. Explore the latest CDC recommendations by clicking here, [RSV Information](#). Additionally, find information on the availability of RSV immunization for infants at <https://www.healthychildren.org/English/tips-tools/ask-the-pediatrician/Pages/is-the-rsv-immunization-available-for-infants.aspx>

As of November 6, 2023, a national backorder affects all doses of this medication, with a current focus on infants weighing under 11 pounds. Additional doses for children weighing 11 pounds and above are anticipated. Despite the ongoing backorder, we encourage interested individuals to contact the office and join our waitlist. If a dose becomes available for your child, we will contact you within 3 business days. Failure to respond promptly will result in releasing the dose to accommodate other families.

### COVID-19 Vaccination:

We are now scheduling COVID vaccines at Steel City Pediatrics. To address uncertainties regarding insurance coverage, families receiving vaccines from our private stock are required to provide a credit card on file.

The COVID vaccine dose your child will get is based on their age.

[CDC Guideline](#)

[COVID-19 Information](#)

To secure a vaccination appointment, all patients must have a credit card on file unless eligible for VFC vaccine. We appreciate your understanding during this challenging time.
